*Rutt's Machine, Inc.* now has a new service:

*MOBILE AIR CONDITIONING MAINTENANCE, REPAIR AND  
INSTALLATION FOR AGRICULTURE & MARINE APPLICATIONS,  
AND CONSTRUCTION & MINING EQUIPMENT*

Rutt's Machine, Inc. is a member of MACS ([www.macsw.org](http://www.macsw.org)) and a registered subcontractor through MSHA ([www.msha.gov](http://www.msha.gov)). All Rutt's technicians are certified through MACS as required by Section 609 of the Clean Air Act. Rutt's technicians are also MSHA certified (Part 46 & 48) to work in coal mines and stone quarries. (Landfills do not require MSHA certification.) Rutt's has the latest instruments, tools, and technology to do these repairs. We also have the capability to make air conditioning hoses in the shop and in the field (Atco crimp and E-Z clip systems).

Rutt's has the ability to check purity of refrigerant and remove if contaminated. Rutt's can also discharge, vacuum, and recharge systems in the field. Rutt's has the ability to check for leaks through UV dye inspection, electronic sniffer, and nitrogen charge. Rutt's uses UView temperature scans to check for temperature differences in the cabs to fine adjust AC systems. Rutt's can install air conditioning/heat units in machines that previously didn't have air conditioning installed in them. Rutt's can retrofit any systems from R12 to R134A.

Rutt's has in stock many parts for a quick turnaround. Parts in stock at Rutt's include receivers-driers, expansion valves, 12V and 24V compressors, evaporators, cab filters, o-rings, condensers, and motors for your heavy equipment or Class 8 trucks. Rutt's is a dealer for DTAC, JBAR (Eagle), Kysor-Bergstrom, and Red Dot.
